| Creator's Historical Note | |
| <p>One of Melbourne's leading architecture practices, the firm has designed many of Victoria's most prominent buildings. It was established by Joseph Reed, who emigrated from England in July 1853. After executing some important commissions, Reed went into partnership with Frederick Barnes in 1862. In 1883 Anketell M. Henderson and F.J. Smart, former employees of Reed and Barnes who had left to set up their own practice, rejoined the firm as partners. In 1890 Henderson left the partnership which was joined in April by W.B. Tappin. Reed died in 1890 and Tappin in 1905. F.J. Smart, now the head of the firm, died two years later and N.G. Peebles, head draughtsman, became a partner with C.P. Smart (son of F.J.). E.A. Bates, who had been trained with the firm and entered into practice with R.G. Hyndman, rejoined Bates, Peebles and Smart to proceed with work on the new Reading Room of the Public Library. In 1922 Peebles died; and in 1936 Bates and Smart were joined by W.O. McCutcheon.</p> <p>The firm has been known by the following names: Joseph Reed (1852-1862); Reed & Barnes (1862-1883); Reed, Henderson & Smart (1883-1890); Reed, Smart & Tappin (1890-1907); Smart, Tappin & Peebles (1907-1916); Bates & Smart (1922-1926); Bates, Peebles & Smart (1916-1922); Bates, Smart & McCutcheon (1926-1995); Bates Smart (from 1996).</p> | |

Scope and Content of Collection/Series

LTD.

The majority of material known as the Bates Smart McCutcheon collection has been consolidated and described in a single finding aid, and is identified by the registration number of the first transfer, 1968.0013. As the majority of the records were transferred by Bates Smart McCutcheon (BSM) and concern jobs prior to 1996, this name has been given to all transfers from this firm. Material in the initial transfer, 1968.0013, includes job files: correspondence, specifications, drawings, invoices etc., 1888-1936; plans and drawings 1862-1926; photographs.

The consolidated collection holds a selection of drawings from every period of the firm's history, beginning with the work of Joseph Reed in the 1850s, as well as a range of contract and correspondence files and photographs. A small quantity of personal material concerning individuals complements their architectural work.

Drawings by Joseph Reed were identified by him in a very simple way, with the first sheet (usually an elevation) identified with project name and subsequent sheets identified only by a drawing number within the project sequence. In contrast, recent projects by Bates Smart are generally identified by a detailed, numbered title block on every sheet. To aid identification of projects and control of materials, a running sequence of job numbers has been imposed by archivists. These 3 digit numbers are shown on the finding aid, alongside the firm's 4 digit internal control numbers if known.

Within the collection are drawings produced by architects working for other firms before joining BSM, notably AM Henderson and EA Bates (who had been trained with the firm before entering into practice with RG Hyndman). Please also search the finding aid for names of architects including Kemp, Oakden, Alsop, Barnet, Eggleston, Stevenson, Annear, Featherstone and many more whose drawings have been acquired by Bates Smart McCutcheon in the course of their work. Garden designer Edna Walling is also represented in this collection (Job 158).

The collection also includes material from contractors, maps, municipal planning scheme documents, aerial photographs and other materials. Where an association with particular BSM jobs is known, this has been indicated on the finding aid.

Many of the materials in this collection are oversized and fragile, and may only be accessed by appointment.

FINDING AID – PART ONE

The first section of PART ONE of the finding aid shows letter files in units 1-39 containing correspondence, specifications, some drawings, invoices and other papers relating to jobs undertaken by the firm. Original file numbers and titles allocated by the firm have been retained. Several administrative & reference volumes follow the boxed files, units 40-44. Note that not all files have corresponding drawings. For drawings, please refer to PART TWO of this finding aid

The last section of PART ONE of the finding aid shows details of photographs and other material.

- Please request material by UNIT number or 13 digit number (left column) and the description shown in the table
