

THE UNIVERSITY OF MELBOURNE ARCHIVES

NAME OF COLLECTION	Michell, Anthony George Maldon (1870-1959)
ACCESSION NO	107/68
CATEGORY	University, individuals
ACTIVITY	Engineers
DATE RANGE	1920-1970
SIZE OF COLLECTION	2,515 items, 10 drawers

**HISTORICAL
NOTE**

Anthony George Maldon (A.G.M.) Michell was born in Islington, London on 21 June 1870. He studied Civil and Mining Engineering at the University of Melbourne, where he graduated with first-class honours (B.C.E., 1895; M.C.E., 1899). He achieved fame with the invention of the Michell Thrust Bearing, which enabled the building of larger and faster ships. He also invented a centrifugal pump (patented 1901), a viscometer and a scheme for hydrolic power transmission. At the age of 80 he published *The Principles of Lubrication*.

The patent application for the crankless engine was made on 19 June 1917. Crankless Engines (Australia) Pty Ltd was established 24 August 1920 to develop the designs, manufacture prototypes and secure licences from overseas manufacturers for large-scale production. Crankless Engines operated from a factory at 129-131 Greeves Street, Fitzroy, Melbourne. The name of the company changed to Crankless Engines Limited when it became a public company on 6 March 1924. The company ceased operations in Melbourne in 1928, although designing and manufacturing proceeded in England and the USA, primarily under George Waller and Sons of Stroud, Hampshire.

In private practice, Michell was a consultant to the Mount Lyell Mining and Railway Company Limited, designing the pumping machinery for the Murray Valley irrigation works, as well as acting as investigator for the Victorian government of the hydroelectric possibilities of the Kiewa River.

Michell became a fellow of the Royal Society in 1934, received the University of Melbourne's Kernot memorial medal in 1938 and was awarded the James Watt International medal by the Institution of Mechanical Engineers (UK) in 1943.

He passed away in Melbourne on 17 February 1959. On his death Michell left his estate to A.J. Seggel, a former workshop manager in the Fitzroy factory, who subsequently bequeathed the technical drawings to the University of Melbourne Engineering department with various model engines retained there (one of which is referred to in the collection as CE 17). They were subsequently transferred to the University of Melbourne Archives in 2007.

Two other noteworthy people are associated with this collection. P.E. Irving worked as a draftsman for the company from 1922 and his signature features on some of the drawings. He went on to design the Vincent motorcycle after World War Two and the Repco Brabham V8 engine, 1966, which won the Formula One championships.

Louis Sherman was Michell's designer and representative in England. Two of the machines that he designed, an 800-horsepower petrol engine (1929) and a 2000-horsepower opposed piston diesel engine (1943) are held by the Smithsonian Institute, Washington and an automobile engine built in 1923 is held with Museums Victoria.

DATE OF TRANSFER	1 December 2007
ACCESS CONDITIONS	Open
DESCRIPTION	2,508 drawings of parts of engines, 1920 – 1929.
NOTE ON COLLECTIONS	<p>Most of the drawings are identified by an engine number (CE...), part number (often several on each item), and drawing number that usually corresponds to a chronological order. Drawing numbers that begin with the letters “SK” usually correspond to sketches, proposed or draft plans. Three drawings have drawing numbers that begin with “MC”, which appear to be designs associated with the University of Melbourne rather than Crankless Engines, Ltd. Some plans have been given a job number rather than an engine number, but this seems to be simply an earlier version of the same filing practice, phased out in 1922.</p> <p>Those plans that have not been given a CE or part number but have been given a drawing number are usually plans of the general arrangement of a particular engine, named in the title, although there are exceptions to this. The company name changes around 1924 from Crankless Engines (Aus) Pty Ltd to Crankless Engines Limited, although there is considerable overlap around that. Apart from showing the change in company status to a publicly-listed company, there does not seem to be any other significance attached to that identifier.</p> <p>The date range usually refers to the date that the plan has been drawn (earlier date) and the date that it was approved (later date).</p> <p>A number of plans were cancelled, and revised plans drawn to replace them. These have been recorded in the notes section.</p> <p>There are a number of brochures, reports and a photograph attached to the collection that do not seem immediately connected with AGM Michell, although loose associations may be inferred from the historical note. The collection also contains photocopies of agreements made with Michell or Crankless Engines, Ltd.</p> <p>See also Accession 91/74, the University of Melbourne Department of Civil Engineering for more information on AGM Michell.</p>
NOTE ON LISTING	<p>The plans have been arranged first by size (small, then large drawings), then roughly by drawing number, which corresponds loosely to a chronological order. This means that CE numbers (representing particular engines) are dispersed.</p> <p>Plans that were drawn or traced by AGMM (Michell), PEI (Irving), RWGM, JWS or TLS have been noted as such because they are noteworthy persons. Blueprints have also been noted.</p> <p>Some items are missing particular descriptors, because those descriptors were not provided on the item itself.</p> <p>Unless otherwise stated, measurements are in inches.</p>
