1. The first part of the paper is devoted to a general discussion of the problem of the existence of a solution of the system of equations (1) for a given set of initial conditions. It is shown that the system of equations (1) has a unique solution for a given set of initial conditions if the functions  $f_i(x, y, z, t)$  are continuous and satisfy the Lipschitz condition with respect to the variables  $x, y, z$ .
